QA Manual | QA Automation | API Testing | CI/CD

Professional Summary

QA Engineer with 6+ years of experience improving software quality across enterprise cloud, AI, and banking applications. Hands-on experience developing and maintaining end-to-end test automation with Cypress and Selenium, performing REST API validation with Postman and validating CI/CD pipelines. Contributed to expanding automated regression coverage, standardizing testing practices, improving QA processes, and collaborating with cross-functional Agile teams to support reliable software releases.

Professional Experience

Teradata, Mexico City **Oct 2022 to Jul 2026**

Senior Test Engineer

- Designed and implemented a standardized Test Plan template in Confluence that became the QA team's standard for future testing activities across multiple projects.
- Automated nearly 50% of the manual regression scenarios across five application modules using Cypress and TypeScript.
- Maintained and improved end-to-end automation suites, increasing regression reliability and supporting faster release validation.
- Executed automated regression suites through Jenkins for every product release, analyzed execution logs and collaborated with development teams to resolve failures before production deployments.
- Executed and validated automated VMware virtual machine deployments using PowerShell deployment scripts for Teradata Vantage on VMware.
- Supported multiple engineering teams by provisioning testing environments and validating deployment integrity using artifacts distributed through JFrog.
- Participated in the early validation of Teradata AI Studio, performing end-to-end functional testing during the initial stages of product development.
- Researched AI-assisted QA workflows using Playwright agents, GitHub Actions and Jira automation to evaluate opportunities for automating test case generation, execution and defect management.

Thomson Reuters, Mexico City **Jul 2021 to Oct 2022**

QA Software Test Engineer

- Maintained Selenium-based automated test suites for the FindLaw platform using Java.
- Validated REST APIs using Postman by verifying request parameters, response payloads and expected HTTP status codes during functional testing.
- Validated advertising tracking and click events using Datadog and Kevel to ensure campaign metrics and user interactions were correctly recorded.
- Used Azure DevOps for work item management and ReportPortal for automated test reporting and execution analysis.
- Collaborated with developers to investigate automation failures and functional defects.

IBM, Mexico City **Feb 2021 to Jul 2021**

Test Specialist

- Prepared and managed test data for enterprise banking systems in SIT environments.
- Simulated banking transactions including SPEI, SPID and TEF operations to support functional testing.
- Coordinated ETL-based test data preparation for banking applications.

Wipro, Mexico City **Aug 2019 to Feb 2021**

Testing Engineer

- Performed analysis, design and execution of functional test cases for enterprise banking applications.
- Executed testing across multiple banking channels including branch systems, online banking, mobile applications and ATM platforms.
- Managed software defects using HP ALM and collaborated with development teams throughout the defect lifecycle.
- Executed up to 150 functional test cases per release while contributing to team execution of approximately 300 test cases per sprint.
- Acted as QA Lead during a PEGA implementation project, coordinating QA activities, mentoring engineers in Mexico and supporting onboarding activities for offshore QA team members in India.
- Supported successful software releases by adapting QA execution plans despite development schedule changes.

Education

Universidad Nacional Autónoma de México, Mexico City **2016 to 2019**

Bachelor's Degree in Computer Science

Technical Proficiencies

Automation:	Cypress, Selenium
Programming:	TypeScript, Java, PowerShell
Testing:	Test Planning, Functional Testing, Regression Testing, API Testing, UAT, Defect Management
CI/CD:	Jenkins, Azure DevOps, GitHub Actions
Tools:	Jira, Confluence, HP ALM, Datadog, Postman, ReportPortal, JFrog
